Simple Localization

By Hippo Games

Welcome! Hope you will enjoy working with my asset!

About:

Localizing your games and apps with this asset is really simple and cool. Create Google Spreadsheet to store localization, save it to CSV format and place to Resources, that's all you'll need to do!

Features:

- Localization of UI components (uGUI)
- Switch localization at runtime
- Invite translators to you Google Spreadsheet
- Clean and simple C# code
- Unity 5, 2017, 2018 support
- Unity uGUI
- Any platform (Standalone, Android, iOS, WebGL)

Usage:

- Create Google Spreadsheet
- Create all required sheets and fill them
- Save each sheet to CSV
- Place CSV to Resources folder
- Add LocalizeText component to all Text components
- Initialize dictionary when app started (please refer to Example)
- Press Review button to write a review and make me happy =)
